DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 4/3/2006 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

3. Claims 1 and 2 are allowed.

4. The following is an examiner's statement of reasons for allowance:

Claims 1 and 2: In view of the limitations, the prior art does not disclosed alone or in combination an electric car apparatus for driving an AC motor, wherein a DC power supply has a maximum potential terminal, an intermediate potential terminal and a minimum potential terminal, and having an upstream side capacitor connected to the maximum and intermediate potential terminal and a downstream side capacitor connected between the intermediate and minimum potential terminal; in addition to include an overvoltage unit having a resistor and a thyristor and being connected between the maximum and minimum potential terminal; a downstream voltage sensor connected in series between the intermediate and minimum potential terminal and an upstream voltage sensor connected between the junction of the resistor

Art Unit: 2837

and the thyristor and the intermediate potential terminal. Furthermore, including a three level inverter being controlled by using voltages detected by the downstream and upstream voltage sensor and the inverter being connected to the maximum, intermediate and minimum potential terminal for supplying AC power to the AC motor.

The related prior art references disclosed in form 892 and 1449 describes various methods and control apparatus for driving AC motor having multilevel inverters and having voltage detectors, however there is no teaching or suggestion to combine the prior art to generate a configuration as claimed that matches the resolutions of the voltage sensors so that accuracy in the voltage detection can be improved in the use of multilevel inverters.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
